

PROFILE

Want to put your own image in the circle? It is easy! Select the image and do a right mouse click. Select "Fill" from the shortcut menu. Choose "Picture..." from the list. Navigate your computer to get the appropriate picture. Click okay to insert your selected image.

Once your image has been inserted, select it again. Go to the Picture Tools Format menu. Click on the down arrow below "Crop" and select "Fill" from the list. This will auto adjust your image to crop to the image. You can click and drag your image to place it appropriately.

Certification in Coding Bootcamp.

Houston Community College

2015

Certification in AUTOCAD (Advanced 3D).

Osmania University

2008 - 2012

Bachelor of Engineering in Electrical and Electronic Engineering from One of the top ranked Institutes in India.

PROJECTS WORK

Project Title: Tune UP!!!!

Url: <https://jkelly101.github.io/tune-up-music-project/index.html>

Language used: HTML, CSS, JavaScript and Ajax.

Description: Tune Up is an app of simplicity that searches artist albums and lyrics. Our app features a search engine that returns a visual list of the inputted artist, as well as text lyrics of selected songs. As lovers of music, we wanted an app that would give the user the ability to formulate a search of album names, release dates, and lyrics. With this app an artist's catalogue is right at your fingertips.

Project Title: JavaScript-CodeQuiz.

Url: <https://ramyamariyala.github.io/JavaScript-CodeQuiz/>

Language used: HTML, CSS and JavaScript

Description: The project involves design and development of a code quiz website with a multiple-choice question. When user answers a question incorrectly then the time is subtracted from the clock by - 10sec. When all questions are answered, or the timer reaches 0 then the game is over. When the game is over then the user can save his/her initials and score.

Project Title: Weather Dashboard

Url: <https://ramyamariyala.github.io/weatherDashboard/>

Language used: HTML, CSS, JavaScript and API

Description: Our weather dashboard with form with inputs the user for searches for a city is been presented with current and future conditions for that city. When user have a view current weather conditions for that city then the user is presented with the city name, the date, an icon representation of weather conditions, the temperature, the humidity, the wind speed, and the UV index WHEN user view the UV index.

TECHNICAL SKILLS

- **Programming/Language:** HTML, CSS, Java Script ,API, AJAX and Nodejs.
- **Source code control:** Visual Studio.
